IMPORTANT BUILDING TERMINOLOGY

In construction, tradespeople use terms like 'square', 'level' and 'plumb' to be sure that their measurements are accurate, and the finished project is successful. Here are some definitions of common building terminologies.

- Square:** when corners are 90 degrees.
- Level:** straight from side to side, like a shelf that's been properly installed.
- Plumb:** straight up and down, like the walls of a building.
- Flush:** when two adjoining surfaces are perfectly flat next to each other.
- Skirting:** a board that runs along the border between the interior wall and the floor.
- Architrave:** is used to frame windows and openings to conceal any shrinkage or movement that may occur between the wall and the casing within the door surround.
- Jamb:** is a flat surface that runs vertically on each side of the door frame.
- Scribe:** cutting away the waste material that is preventing two materials from meeting together perfectly.

IMPORTANT INFORMATION

- Pre-drill board and countersink before fixing to walls.
- Read guidelines carefully before commencing.

Step 9

Check wall for plumb, place level on wall.

If wall greater than 3 mm out of plumb, scribe infill.

TIP: Refer to our guide – How to scribe infill.

All our guides are located at:
stegbar.com.au/support

If required, using the 6 x 28 6-gauge screws, screw 16 mm infill to wall side of shelf unit flush with the front.

Screw infill to side of tower if required from front or back.

Step 10

Measure the width and depth of towers and mark skirting with pencil (be sure to include the infill if infill required).

Step 11

Use multi tool to cut and remove skirting where towers are to be installed.

Step 12

Pre-drill 2 x 3 mm holes into tower nailer.

Place towers in position. Place level on towers to ensure level and plumb.

Mark wall with pencil.

Fix 40 mm screw into stud – if stud is not present, then fix with screw and plug (wallmate).

TIP: Use packers to level tower.

TIP: Pre-drill board and countersink.

Step 13

Use spirit level to mark horizontal line from top of shelf unit across full width of rear wall for back cleat and side cleat positioning.

Locate wall studs with stud finder and mark wall above pencil line (no greater than 16 mm).

Step 14

Measure distance between towers.

Cut back cleat to size.

Apply liquid nails to back of cleat in radio wave pattern and screw cleat to wall into stud.

TIP: Pre-drill board and countersink.

Step 15

Open Top Shelf box.

Measure top shelf width ensuring you check the walls are square using a square edge.

Cut top shelf to correct size allowing for wall run outs.

Place top shelf into position. Screw top shelf down into wall cleats using 40 mm screws.

TIP: Pre-drill board and countersink.

Step 16

Measure 214 mm off cleat on back wall and 80mm down from side cleat, thus measurement is to the bottom hole of hanging rod end.

Fix hang rail ends using 16 mm screws.

Step 17

Measure distance between towers and deduct 6 mm off overall width.

Cut hang rail to size and insert into hanging rail end ends.

TIP: Face top hang rail with groove up.

Step 18

Hanging rail sharkfin support must be screwed into a stud.

Push sharkfin support into wall cleat, making sure sharkfin is plumb and square with back cleat.

Screw sharkfin support into back cleat and top shelf with 13 mm screws and 40 mm screw into wall stud.

Step 19

Using caulking, gap all connections between board and wall or board and board.

Step 27

Install adjustable shelves.

Place shelf pins into tower at desired heights.

Place shelf on pins.

Step 20

Fast cap (white dot) all screws.

Clean shelving with damp cloth and remove stickers.
