

ALUMINIERE

ALUMINIUM
WINDOWS & DOORS

A JELD WEN Company

ALUMIERE FROM STEGBAR. WHEN YOU WANT NOTHING STANDING BETWEEN YOU AND YOUR VIEW.

With a strong, bold profile and a mitred sash common across all windows in the range, the Alumiere premiere aluminium window and door suite offers the look of bespoke joinery. This makes it perfect for prestige residential and multi-residential homes, along with high-end commercial applications such as health and community, education and retail. Alumiere is also ideal for modern architecture, where the emphasis is on ample windows and open plan living.

The system uses three frame widths (80mm, 113mm and 136mm) that fit together modularly, so you can create your own unique window and door configurations. And to meet the exacting demands of architecturally designed homes and buildings, the size limitations have been increased and now panel heights of up to three metres can be achieved.

- Large expanses of glass to frame your landscape.
- Bold substantial profiles – 84mm door sash and 46mm window sash section.
- Resists the elements and high winds.
- Extensive hardware options.
- High-performance glazing options to meet your thermal, privacy, security and acoustic requirements.
- All windows keyed alike for ease of use.
- Available in a range of powder coated and anodised aluminium colours.

For advice on selecting or designing your Alumiere windows and doors, the Stegbar sales team are there to help.

A LONG HISTORY OF INNOVATION.

Stegbar has been building windows and doors for over 70 years. In the early 1950s, working with famed architect Robin Boyd, we revolutionised Australian home design with the launch of the Windowall. This spirit of pioneering new solutions is still integral to how we work today. And for even more reassurance that you're buying the best, Stegbar now has the backing of JELD-WEN, the world's largest window and door manufacturer.

AWNING WINDOW (PICTURED).

Ideal for both residential and commercial applications, these high performance awning windows provide ventilation and ultimate protection from elements.

- Hinged at top, opens at the bottom.
- Excellent air and moisture resistance.
- Low air infiltration for high energy performance.
- A range of locking mechanisms and winders available:
 - Integrated cam catch works with the insect screen for a clean, modern look.
 - Corrosion-resistant scissor winder.
 - Larger awning windows feature a single cam catch with concealed multipoint locking mechanism for a cleaner, seamless look.

ALUMIERE WINDOWS.

DOUBLE HUNG WINDOWS.

Alumiere double hung windows offer superb ventilation and are unobtrusive so they won't protrude over decks and walkways.

- Low air infiltration for high energy performance.
- Non-visible springs for a clean look.
- Substantial bold sashes give the feel of timber.
- Easily removable sash for cleaning and maintenance.
- Easily installed flyscreen.

SLIDING WINDOWS.

With the ability to be mixed and matched with other Alumiere windows and doors, sliding windows provide architectural style with commercial quality.

- Specialist options available to suit the requirements of architecturally designed homes and buildings.
- Corner configurations available.
- Easily installed insect screens – one push and it's installed.
- Insect screens integrated into design – for entertaining, use the 113mm or 136mm frame for moving screens.
- Hardware options include a low profile lock with smart vent locking or sleek stainless steel pull-handle and concealed key lock (super smooth, heavy duty double bogey rollers come as standard).

STACKING WINDOWS (COMING SOON).

The stacking window allows all the panels to be stacked together to create a large open space perfect for entertaining.

- Two, three, four and six stacking window and corner configurations available.
- Insect screens integrated into design—for entertaining, use the 113mm or 136mm frame for moving screens.
- Corner configurations available.
- Specialist options to suit architectural designs.

CASEMENT WINDOWS.

Hinged at the side, with one vertical edge opening outwards, casement windows maximise ventilation flow. Being compression windows, casement windows offer the highest level of air performance.

- Low air infiltration for high efficiency performance.
- A range of locking mechanisms and winders available:
 - Integrated jamb lock works with the insect screen for a clean, modern look.
 - Corrosion-resistant scissor winder.
 - Larger casement windows feature a single cam catch with concealed multipoint locking mechanism for a cleaner, seamless look.

FIXED WINDOWS.

Fixed windows are perfect for glazed wall systems and situations requiring natural light, such as stairwells.

- Fixed windows can be mixed and matched in conjunction with other Alumiere windows, allowing multiple configurations.
- Use silicone butt joint for corners to create a seamless window.
- 3000mm limitations for fixed window sizes.

ALUMIERE DOORS.

STACKING DOORS (COMING SOON).

With their unique stacking action, these doors have a solid, commercial appeal all of their own.

- Multiple door furniture and locking solutions.
- Up to four panels sliding in one direction – uneven stacking options for those unique applications that require something a little different.
- Provide an expansive opening of up to eight panels.
- All door sashes align when stacked to provide a seamless/unobstructed view.
- Panels of up to 3000mm high and 1800mm wide subject to site conditions.
- Concealed strengthening bars for a clean unobtrusive design.
- Low sill is easily replaceable.
- Comes with PVC sill protectors to avoid sill damage during construction.
- Corner configurations available without corner post.

HINGED DOORS.

Ideal for many different situations, whether it is a front door, French doors or a utility door for a laundry or garage.

- Suitable for exposed applications.
- Heavy-duty hinges.
- Available in single and double (French door) configurations.
- Open in, open out, side lite, high lite, sill and no sill options.
- Panels of up to 3000mm high and 1200mm wide depending on site conditions.
- Corrosion resistant hardware with night latch snib and multipoint mortice lock as standard.
- Lock is backset 40mm to avoid knuckle grazing.
- Screen door is fully integrated into the frame for a seamless look.

SLIDING DOORS.

These solidly constructed sliding doors lend a confident commercial style to any setting.

- Concealed strengthening bars provide a clean, unobtrusive design.
- Multiple door furniture and locking solutions.
- Low sill is easily replaceable.
- Sliding door comes with PVC sill protectors to avoid sill damage during construction.
- Easily adjustable high performance rollers for effortless gliding.
- Two and four panel configuration options.
- Panels of up to 3000mm high and 1800mm wide subject to site conditions.
- Corner configurations available without corner post.

ALUMIERE OPTIONS.

THE ALUMIERE RANGE FEATURES A VARIETY OF DIFFERENT OPENING STYLES AND CONFIGURATIONS. BUT IT'S WHEN YOU START COMBINING THESE OPTIONS THAT THE CHOICES BECOME REALLY DIZZYING. IF YOU CAN IMAGINE A CONFIGURATION OR HAVE A TRICKY SPACE TO FILL, CHANCES ARE WE'LL BE ABLE TO HELP BRING IT TO LIFE.

COLOUR RANGE.

Whether you want to complement or contrast the colour scheme of your building, choosing the right finish for your doors and windows is a critical decision. Luckily, all Alumiere window and door suites are made-to-order, so you have the ultimate freedom to select the perfect powder coat colour or anodised finish for your build.

GLAZING.

Alumiere will help you fill your home with large expanses of glass and light, emphasising ample windows and open plan living, all the while maintaining your perfect comfort.

There is a large selection of commonly used and high spec glass types for consideration. The glazing range for Alumiere covers all areas of glass including thermal efficiency, security, acoustics and privacy. All Alumiere windows and doors are WERS rated.

- 4mm–22mm glazing pocket.
- Easily accepts IGU's.

To find out more, speak to your Stegbar Sales Consultant.

ONE KEY SOLUTION.

A number of keying options are available for the Alumiere range. A one key solution reduces the number of keys you need and can simplify and improve security. With this option a single key can be used to operate all windows, and another to operate all doors. And with fewer keys, you have less to worry about.

SCREENS.

There are a number of screening options for the Alumiere range.

Brio Retractable pleated insect Screens.

- The innovative Brio retractable pleated insect screen comes with a 5-year warranty.
- Single and bi-parting configurations.
- Corner units available – without corner posts.
- Available in standard black, white and silver, with custom colour options.

Insect Screens.

- Alumiere insect screens provide an unobstructed view while keeping nature's little nasties outside.
- Alumiere insect screens have been designed to feel fully integrated, not a clumsy afterthought.
- Frames are available colour-matched to your Alumiere windows and doors.
- Available with a variety of mesh materials.
- Benefit from over 70 years of experience.

UPGRADE YOUR HARDWARE.

Choosing the right hardware not only determines the usability of your windows and doors, but is also the finishing touch that can elevate the design to something truly special.

The hardware in the Alumiere range has been designed with our harsh climate in mind and is constructed from high-end, corrosion-resistant materials. This ensures it will meet the rigors of the Australian environment, whether you live by the coast or high on a wind-swept ridge top.

We have developed two unique ranges of hardware. The Essences range features contemporary designs created for flawless performance.

An upgrade to our Select range offers the chance to complement the design of your door and windows with high-grade stainless steel finishes, providing a stylish, unified look throughout your home.
